

WHAT IS CLAIMED IS:

1. A method for the secure recording and playback of Multi-media programming by a recording device comprising:

inputting a recording authorization instruction into a recording device, said authorization instruction operating to authorize activation of a recording mechanism component of said recording device;

recording said at least one Multi-media program;

inputting a playback authorization instruction into said recording device, said playback authorization instruction operative to authorize the activation of a playback mechanism component of said recording device; and

playing back said at least one Multi-media program.

2. The method according to claim 1 wherein said recording authorization instruction and said playback authorization instruction are identical.

RECEIVED "03/04/00"

3. The method according to claim 1 wherein said recording authorization instruction comprises a first password.
4. The method according to claim 1 wherein said at least one Multi-media program comprises one of Cable broadcasts, Satellite broadcasts and television programs broadcast in at least one of UHF, VHF, HDTV transmission formats.
5. The method according to claim 1 wherein said recording device includes a storage component comprising a hard disk.
6. The method according to claim 1 wherein said playback authorization instruction comprises a second password.
7. The method according to claim 1 further including a step of designating a specific Multi-media program as restricted.
8. The method according to claim 7 further including a step of playing back said restricted Multi-media program upon receipt of said playback authorization instruction.

9. A method for the secure recording and playback of Multi-media programming by a recording and playback device comprising:

designating specific Multi-media programs as restricted, said restricted Multi-media programs requiring at least one of a playback authorization instruction and a recording authorization instruction to authorize said recording device to one of record and playback said restricted Multi-media programs;

inputting said recording authorization instruction into said recording device, said recording authorization instruction operative to authorize activation of a recording mechanism component of said recording device;

recording at least one of said restricted Multi-media programs; and

inputting a playback authorization instruction into said recording device, said playback authorization instruction operative to authorize activation of a playback mechanism component of said recording device.

10. The method according to claim 9 wherein said recording authorization instruction and said playback authorization instruction are identical.

11. The method according to claim 9 wherein said recording authorization instruction comprises a first password.

12. The method according to claim 9 wherein said playback authorization instruction comprises a second password.

13. A device for the secure recording of Multi-media programs comprising:

a programmable recording device, said recording device having 1) a recording mechanism and 2) a playback mechanism, said recording mechanism adapted to record Multi-media programs, said playback mechanism adapted to playback recorded Multi-media programs; and

a programming control interface, said programming control interface operative to selectively 1) activate said recording mechanism in response to a first user authorization instruction, and

2) selectively activate said playback mechanism in response to a second user authorization instruction, wherein 1) recording of said Multi-media programs requires said first user authorization instruction to be entered into said programming control interface thereby activating said recording mechanism and permitting said Multi-media programs to be recorded, and 2) playback of said recorded Multi-media programs requires said second user authorization to be entered into said programming control interface thereby activating said playback mechanism and permitting said recorded Multi-media programs to be played.

14. The device according to claim 13 wherein said Multi-media programs comprise one of Cable broadcasts, Satellite broadcasts and television programs broadcast in at least one of UHF, VHF and HDTV transmission formats.

15. The device according to claim 13 wherein said first user authorization instruction and second user authorization instruction are identical.

16. The device according to claim 13 wherein said recording authorization instruction comprises a first password.

17. The device according to claim 13 wherein said playback authorization instruction comprises a second password.

18. The device according to claim 13 further including an interface for receiving Multi-media programs selectively designated as restricted.

19. The device according to claim 18 wherein said device is arranged to playback said restricted Multi-media program upon receipt of said playback authorization instruction.

20. A method for the secure recording and playback of Multi-media programming by a recording and playback device comprising:

designating specific Multi-media programs as
restricted;

inputting a playback authorization instruction into
said recording device, said playback authorization instruction

operative to authorize activation of a playback mechanism
component of said recording device; and
playing back said restricted Multi-media programs.

21. The method according to claim 20 wherein said first user authorization instruction and second user authorization instruction are identical.
22. The method according to claim 20 wherein said recording authorization instruction comprises a first password.
23. The method according to claim 20 wherein said playback authorization instruction comprises a second password.
24. A programming control interface for use with a recording device having a recording mechanism and a playback mechanism, comprising:
- 1) a recording activator for activating said recording mechanism in response to a first user authorization instruction, and

2) a playback activator for selectively activating said playback mechanism in response to a second user authorization instruction,

wherein 1) the programming control interface is adapted such that the recording of said Multi-media programs requires said first user authorization instruction to be entered into said programming control interface thereby activating said recording mechanism and permitting said Multi-media programs to be recorded, and 2) playback of a recorded Multi-media program requires said second user authorization instruction to be entered into said programming control interface thereby activating said playback mechanism and permitting said recorded Multi-media programs to be played.
